

Report

Final Grade Weighting Rule

The instructor can add on different components of a grade for a section collectively, while also being able to delete or update said components. They are required to provide the max score of said component, along with the weight out of 100 (Eg. 25%). Once the weights of all components add up to 100, and a valid score is entered for each component, the final grade is computed using the rule below:

Final Score	100	90-99	80-89	70-79	60-69	50-59	40-49	30-39	<30
Letter Grade	A+	A	A-	B	B-	C	C-	D	F
Grade Point	10	10	9	8	7	6	5	4	2

The CGPA is calculated using the formula:

$$\text{GPA/CGPA} = \frac{\sum_{i=1}^n C_i GP_i}{\sum_{i=1}^n C_i}$$

Where, GP = Grade Point and C = Credits

How Roles And Maintenance Are Enforced

When a user logs in, their credentials are verified through the 'authdb' database. Based on the stored role (student, instructor, or admin), the ERP automatically redirects them to the appropriate dashboard. Each dashboard only displays the actions allowed for that specific role. (For Eg. an admin is taken to the Admin Dashboard and cannot perform student or instructor functions.)

Administrators have full system privileges. They can create or delete user profiles and assign usernames, roles, and passwords at the time of creation. They also manage courses and sections, including assigning instructors. Additionally, admins may enable database backup or restore, toggle Maintenance Mode, and set registration or drop deadlines. Administrators may also send notifications to students when required.

Students are able to browse the course catalog, register for available sections, and drop sections before the deadline. They can only enroll if seats are available and cannot view data of other students. Their dashboard also allows them to view their profile, notifications and timetable, check their grades, and download their transcript in CSV or PDF format.

Instructors can view and edit their own profile and access only the sections assigned to them. They can view the roster of students enrolled in each section and export the list in CSV or PDF format if needed. Instructors can add, update, or remove grading components and enter marks for their students. After all components are entered, the system calculates the final score and assigns a final grade.

Maintenance Mode is controlled by the admin. When Maintenance Mode is turned ON, a banner is displayed across all pages to notify users. A notification is also automatically sent to students. While Maintenance Mode is active, students and instructors can still log in and view data, but all actions that modify the database are blocked. Once Maintenance Mode is turned OFF, the users regain their ability to perform write actions.
